

New Jersey AIDS/HIV/STD Hotline

PRESS RELEASE

June 2023

Take the Test & Take the Next Step National HIV Testing Day

(New Jersey) – June 27th marks the annual observance of National HIV Testing Day (NHTD), a day to encourage people to get tested for HIV, know their status, and start prevention or treatment options that are right for them. Not only is HIV testing key to living healthy with HIV, it's an important link to prevention services for those who do not have HIV.

Testing is the only way to be sure of HIV infection. It is not only important to know your own HIV status, but also the HIV status of your sex partner(s). There are many testing options and locations available for fast, free, and confidential [HIV testing](#). If you rather test in the privacy of your own space, you can use a [HIV self-test](#). For NJ testing locations, contact the New Jersey AIDS/HIV/STD Hotline: 1-800-624-2377 or [Chat Here](#)

If you're having sex or using drugs, you're at risk for HIV and other sexually transmitted infections (STIs). Anyone regardless of race, ethnicity, age, gender identity, sexual identity, or sexual orientation can get or pass HIV and STIs to others. Some [sex practices](#) and behaviors carry a higher risk of exposure to HIV/STIs than others. If you are at higher risk, get tested for HIV/STIs more often.

Many people live with HIV for years before being diagnosed and starting treatment. Testing not only helps diagnose people who think they may have been exposed to HIV, it also diagnoses people who didn't know they were living with HIV. Starting and continuing treatment keeps the virus under control and helps people with HIV stay healthy, live longer, and lower their risk of HIV-related illnesses. It also prevents them from passing HIV to others.

Get Tested. Connect to Services. Stay Healthy.

Knowing who to call for resources and information is the first step in ending the HIV epidemic. New Jersey offers free HIV and other STI services to anyone living in the state. Contact the New Jersey AIDS/HIV/STD Hotline for sexual health information or to get connected with free sexual health services. Calls to the hotline are free and confidential.

If you test positive for HIV (have HIV):

- continue using [safer sex practices](#) to lower your risk of passing HIV.

- start HIV [treatment](#) right after getting your positive test result.
- treatment is recommended for all people with HIV, no matter your age, how long you've had HIV, or how healthy you are.
- [share your HIV status](#) with previous and current sex partners(s) and anyone you share needles, syringes, or other drug injection materials/equipment.
- get and keep an [undetectable viral load](#) (very low amount of HIV in the body) so you can stay healthy and not pass HIV to others through sex. (Undetectable=Untransmittable or U=U).
- continue using [condoms](#) (external or internal) the right way every time you have sex to prevent getting common sexually transmitted infections (STIs).

If you test negative for HIV (do not have HIV):

- continue using [safer sex practices](#) to lower your risk of getting HIV.
- [talk to your sex partner\(s\)](#) about testing and their HIV and STI status.
- make testing part of your yearly health checkups. If you are at high risk for HIV, get tested more often.
- talk to your healthcare provider about using HIV medicines to prevent getting HIV if you are at high risk of getting HIV or were recently exposed to HIV: [PrEP \(pre-exposure prophylaxis\)](#) or [PEP \(post-exposure prophylaxis\)](#) continue using [condoms](#) (external or internal) the right way every time you have sex to prevent getting common sexually transmitted infections.

New Jersey AIDS/HIV/STD Hotline

New Jersey offers free HIV and other STI (Sexually Transmitted Infection) services to anyone living in the state. The hotline's medical staff (doctors, nurses, and pharmacists) are available 24 hours a day, 7 days a week to assist callers looking for information or free sexual health services including referrals to pre-exposure prophylaxis (PrEP) and post-exposure prophylaxis (PEP) services. Calls to the hotline are free and private (confidential).

Callers receive information tailored to their needs; discussion about prevention, referrals for testing sites and other related services, counseling and testing locations, and information on treatment and adverse reactions to medications. The hotline is administered by the New Jersey Poison Control Center at Rutgers New Jersey Medical School and funded by the New Jersey Department of Health, Division of HIV, STD, and TB services. For more information, visit call 1-800-624-2377, [chat here](#), or visit [njhivstdline.org](#).

Rutgers New Jersey Medical School

Founded in 1954, Rutgers New Jersey Medical School is the oldest school of medicine in the state. Today it is part of Rutgers, The State University of New Jersey and graduates approximately 170 physicians a year. In addition to providing the MD degree, the school offers MD/PhD, MD/MPH and MD/MBA degrees through collaborations with other institutions of higher education. Dedicated to excellence in education, research, clinical care and community outreach, the medical school comprises 20 academic departments and works with several healthcare partners, including its principal teaching hospital, University Hospital. Its faculty consists of numerous world-renowned scientists and many of the region's "top doctors." Home to the nation's oldest student-run clinic, New Jersey Medical School hosts more than 50 centers and institutes, including the Public Health Research Institute Center, the Global Tuberculosis Institute and the Neurological Institute of New Jersey.
